Professional Summary

Detail-oriented data quality and documentation professional with 15+ years of experience reviewing structured investigative data and reports for accuracy, completeness, and compliance with federal standards. Performed project-based Quality and Integrity Assurance work auditing investigative files, validating reported information against source records, and identifying errors, omissions, and discrepancies. Strong background in structured document review, interview-based validation, and preparing clear written summaries of findings. Currently developing technical skills in SQL, data validation, and QA methodologies. Highly experienced in remote, asynchronous work environments.

Professional Experience

- **Special Investigator (remote) |** *CACI (2025-pres)*; *KeyPoint/Paragon/OPM (2009-2024)*
- **Integrity/Quality Assurance** (special projects): audited investigative files and reports for data integrity, completeness, and rule compliance, documenting findings.
- Reviewed and validated structured investigative data and documentation, identifying errors, inconsistencies, omissions, and discrepancies.
- Synthesized information from record review, research, and interviews into clear, plain-language investigative reports.
- Incorporated feedback through multiple revision cycles while meeting deadlines.
- Ensured compliance with federal regulations governing sensitive data and PII.
- Mentored new investigators, provided feedback, and supported onboarding.
- Worked independently in fully remote, asynchronous environments while collaborating with distributed teams.

Education/Certificates

- **B.A. English (Writing), Cum Laude (GPA 3.7) -** George Mason University *(2009)*
- Certificates: Microsoft PL-300 / Microsoft DP-900 *(in progress)*, Postman API Student Expert, HIPAA for Business Associates, Managing Multiple Priorities (Fred Prior)

Technical Skills/Experience

- **Languages/Markup**: SQL / relational databases, Python, JavaScript, Markdown HTML, CSS
- **Frameworks & Libraries**: React, Bootstrap, Node.js
- **Developer Tools**: Git, GitHub (version control), VS Code, Replit, Netlify, Power BI (dashboard/data visualization), pgAdmin, Jira (exposure), WordPress, Madcap Flare, Google Analytics (GA4)
- **Systems & Platforms**: Windows, PowerShell, Microsoft Office

Personal Projects

- Practiced data validation and QA logic using JavaScript, SQL, and Python to evaluate inputs, expected outputs, and edge cases.
- Defined and reviewed data fields, schemas, and validation rules to support accuracy and consistency.
- Built small web-based components to understand data flow between front-end inputs and backend logic.
- Documented workflows, data structures, and validation rules using Markdown.
- Used Git/GitHub for version control, change tracking, and documentation history.
- Logged defects, observations, and QA notes using Jira-style workflows.
